

- LINK for the full code

- Github link: <https://github.com/Eyo123/isad251refern>

- A custom GitHub prototype page for your application containing the following:
 - o Linked YouTube video (of you using your database application)
 - o Screenshots of the application
 - o Application fact sheet
- Your GitHub repository containing the following:
 - o All source code for your database application (including .SQL files)
 - o A link to your video hosted on YouTube.

- To access all the link of the application fact,uml,storyboard

- <https://github.com/Eyo123/isad251refern/tree/master/Documents>
This is the link of my GitHub repository under the file document you have all the uml,storyboard ,api,test.

- To access all the video and the screenshot

LINK TO MY VIDEO HOSTED ON YOUTUBE:

<https://github.com/Eyo123/isad251refern/blob/master/isad%20cw/link%20to%20YouTube%20video>

To access the code

<https://github.com/Eyo123/isad251refern/tree/master/isad%20cw>
this the link to access it

APPLICATION FACT

I had to create an application that will allow a child to enter the deadline and a parent book an appointment.

_parent

To do it I created an admin login and a customer login to allow a random child to only see the deadline he have submitted and to allow a random parent to double checked the appointment he made.

In the admin page the default username is admin and the password is pass1.when you log you can add details of your appointment, the code stand to differentiate each parent that use the app,the date when you will like the appointment, the note and the time you would like to, the number of place for your family and finally the price.

Once you add the appointment, you will be able to confirm only if you make an account in the customer login. This is why I did that in case there is many customers. Once are in the home page you will see a list of the appointment that were already free and what you

added, furthermore you will be apt to book it, amend it and cancel, moreover delete your account.

-child

when you log you can add details of your deadline the code stand to differentiate each child that use the app, the name of the child, the details of the deadline, the actual grade you have and the grade you want to have.

Once you add the deadline, you will be able to confirm only if you make an account in the customer login. This is why I did that in case there is many customers. Once are in the home page you will see a list of the deadline that were already free and what you added, furthermore you will be apt to book it, moreover, delete your account.
